My notes

Source: Microsoft Support, Date systems in Excel (1900 system, 1,462-day difference to the 1904 system, Ctrl+1 to open Format Cells). Serial numbers for 2027 are our calculation, checked against Microsoft's anchor: Jan. 1, 2008 is 39448. For the 1904 system, subtract 1,462. Fix steps: select cells, press Ctrl+1, choose Date; if the cell is text, use the text-to-date function (DATEVALUE).
